PROFESSIONAL SUMMARY

Software engineer pursuing B.Tech in AI & Data Science (CGPA 8.6/10) with 3 internships across backend systems, full-stack apps, and applied AI. Currently building production infrastructure at SwapSo — OTP authentication, event-driven webhooks, and idempotent payment flows on Node.js, MongoDB, and Redis. Strong DSA foundation (600+ problems), 4x hackathon winner, GDSC Technical Head. Seeking full-time SDE roles.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Backend & Frameworks: Node.js, Express.js, REST APIs, Microservices Concepts, React.js

Databases & Infra: MySQL, MongoDB, Redis, MongoDB Atlas, Connection Pooling

Concepts & Tools: Webhooks, Rate Limiting, Retry Logic, Caching, AES-256-GCM, HMAC-SHA256, LLM Agents & Prompt Engineering, NLP, Playwright, Browser Automation, Git, AI-Assisted Development (Copilot, Claude)

EXPERIENCE

Software Development Engineer | SwapSo

May 2026 – Present · Remote

- Built OTP authentication backend (Node.js, TypeScript, MongoDB, Redis) with TTL-based expiry, rate limiting, CAPTCHA, and retry/fallback logic — reducing DB load and improving verification response time under traffic spikes.
- Architected a provider-abstracted gift-card rewards integration for a crypto wallet: event-driven webhook processing with HMAC-SHA256 verification, idempotent 1.25% USDC cashback engine, AES-256-GCM encryption, and 400+ brand catalogue sync — a reusable integration pattern across reward providers.
- Configured Redis caching, MongoDB Atlas, and connection pooling for production-scale deployment; shipped React Native catalogue/voucher UI.

Software Developer (Consultant) | The Sibling Corp

Sep 2025 – Dec 2025 · Remote

- Designed and shipped Quick Basket — farmer-to-consumer marketplace (Node.js, Express.js, MongoDB, React Native) launched on Android and iOS, eliminating supply-chain middlemen.
- Architected scalable REST APIs, data models, and schemas for end-to-end order management; owned the feature lifecycle from client requirements through design, build, and mobile deployment.

Frontend Developer Intern | Growigh

Jul 2025 – Sep 2025 · Remote

- Built a fully responsive React.js landing page integrated with backend REST APIs — Lighthouse score 64 to 91/100 via code splitting and asset optimization; 40% faster load time and 25% higher avg. session duration post-launch.

PROJECTS

JanSetu Health System · [Live](#) · [GitHub](#)

Next.js, MongoDB, Gemini, NLP, RAG, OpenStreetMap APIs

- Built a rural disease-surveillance platform: ASHA health workers speak field reports, a custom NLP parser extracts disease entities and case counts, and a live map updates with risk zones, trends, and outbreak alerts — replacing days of manual HQ reporting.
- Designed a correlation engine that cross-checks two independent data streams — worker-reported cases vs. actual medicine sales at local shops — to flag outbreaks and under-reporting that neither source catches alone, with deterministic rule-based risk scoring.
- Shipped an LLM health chatbot (Gemini + RAG retrieval) that guides residents to OTC medicines and reserves them at nearby pharmacies via pickup codes, with deterministic emergency-detection and OTC/RX safety gating.

AI Document Assist · [Live](#) · [GitHub](#)

React, Node.js, Express, MongoDB, Python, Gemini, Tesseract OCR, Chrome MV3

- Built a hybrid document-extraction pipeline (Gemini vision → Tesseract OCR + 25 regex extractors → Gemini text fallback) that parses 6 government document types into 31 canonical fields, with per-field confidence scoring.
- Scored scheme eligibility with a 7-signal weighted engine (Gemini re-ranks top matches) over a Python crawler that syncs the MyScheme catalogue; a Chrome MV3 extension replays AI-generated field mappings to auto-fill multi-step application forms end-to-end.
- Layered every subsystem as deterministic rules first, LLM on top, schema validation around the output — Gemini is never a single point of failure; every endpoint stays functional if the model is fully down.

EDUCATION

B.Tech — Artificial Intelligence & Data Science, University of Mumbai (TCET) · CGPA 8.6/10

Aug 2023 – Present

HSC (Class XII), Maharashtra State Board · 2023 · 70.17% | SSC (Class X), Maharashtra State Board · 2021 · 79.40%

ACHIEVEMENTS & LEADERSHIP

- Technical Head — GDSC, TCET Mumbai:** designed and delivered technical workshops and live demos for 200+ student developers, adapting explanations of complex topics to mixed-skill audiences.
- Problem Setter — Shastra Coding Club, TCET:** designed competitive programming problems for inter-college contests.
- 4x Hackathon winner · SIH Institute-Level Finalist · GSSoC 2024 Open Source Contributor · 600+ DSA problems solved.
